

VS 75mm Radial x 20m Antibacterial Pipework

Technical Specification

Part Number	P4A-20
Product Type	Antibacterial Pipework
Nominal Diameter	75mm
Coil Length	20m
Material	High-Density Polyethylene (PE-HD)
Construction	Corrugated Double-Wall Pipe
Internal Surface	Smooth Antibacterial Lining
Installation	Floors, Ceilings & Service Voids

Key Features

Antibacterial Inner Surface

Flexible Semi-Rigid Design

Smooth Bore for Efficient Airflow

Product Overview

The VS 75mm Antibacterial Radial Duct is designed for radial MVHR, MEV and mechanical ventilation systems, creating individual airflow routes between the distribution manifold and room terminals.

Its flexible, semi-rigid construction allows the duct to be routed through floors, ceilings and service voids while helping to minimise the number of joints required throughout an installation.

Featuring a smooth antibacterial internal lining, the duct supports a clean air-distribution system while promoting efficient airflow and helping to reduce dirt deposits. Supplied as a 20m coil, it can be cut to the required length on site and connected to compatible 75mm radial fittings.
